

LASER HAIR REMOVAL POST-PROCEDURE CARE

It is important to the health of your skin and the success of your procedure that you follow the recommendations listed below.

1. Redness & Bumps are normal.

Immediately after your treatment, redness & bumps at the treatment area are common; these may last up to 2 hours or longer. It is normal for the treated area to feel like a sunburn for a few hours. You should use a cold compress if the sensitivity continues. Additionally, you may apply over the counter hydrocortisone cream to areas twice daily for 1-3 days.

2. Cleanse the area treated gently.

The treated area may be washed gently with a mild soap. Skin should be patted dry & not rubbed during the first 48 hours.

3. No makeup & lotion/moisturizer/deodorant for the first 24 hours.

Keep the treated area clean & dry; if further redness or irritation persists, skip your makeup, moisturizer, & deodorant (for underarms) until the irritation has subsided.

4. Dead hairs will begin to shed 5-30 days after your treatment.

Stubble, representing dead hair being shed from the hair follicle, will appear within 5-30 days from the treatment date and will shed during this time.

5. Avoid the sun.

Avoid sun exposure to reduce the chance of dark or light spots for 2 months. Use sunscreen (SPF 30 or higher) at all times throughout the treatment period & for 1-2 months following.

6. Do not pick/scratch/wax/thread/tweeze the area.

Avoid picking or scratching the treated skin. Do not use other hair removal methods or products, other than shaving, on the treated area during the course of your laser treatments, as it will prevent you from achieving the best results.

7. Hair growth varies.

On average, most individuals will experience a level of satisfactory results after 6-9 sessions.
